Scientifically proven to reduce back strain compared to conventional designs

**BARROW**  
COMPANY LLP

The Busy Barrow™ is a versatile, multi-terrain, multi-purpose, heavy duty wheelbarrow. Its unique patented skip-like barrow pivots to keep loads level, detaches for easy loading and unloading and significantly reduces the strain on the operators body when compared to conventional wheelbarrows.

**Ease of Use:** Tests carried out at the University of Worcester showed that the Busy Barrow lessens the overall impact on the body by as much as 45 per cent. Great news for anyone suffering from back or joint problems.

### Busy Barrow - How it Works

The Patented design of the Busy Barrow has features that combine to allow the Busy Barrow to reduce strain on the operator, keep loads level, negotiation hills, detach and exchange skips and make tipping easier.

Here is a short guide to the clever features of the multi-purpose Busy Barrow, the "Super Wheelbarrow".

#### Pivoting Skip

The Busy Barrow's galvanised steel skip is free to pivot just like the large skips you see on lorries. This means that when you lift the wheelbarrow the skip and its contents remain level - no more spills.

Secondly, due to the design of the steel frame, the skip moves forward to substantially distribute the weight onto the front wheel, therefore reducing the load on the handles, this significantly reduces the strain on the operator.

Moreover, by raising the handles to a vertical position the skip can be rested on the ground for easy loading and unloading.

#### Level Load

The pivoting skip also allows the Busy Barrow to tackle slopes that would defeat a conventional wheelbarrow. The skip and load remain level with the load being concentrated on the wheel.

When you reach your destination, the skip can be parked by raising the handles to a vertical position and can be detached easily. This allows you to drop off one skip and pick up another.

**Less Effort:** When carrying a load in the Busy Barrow, the pivoted bucket moves forward, over the axle, therefore reducing the weight on the arms. Not only that, on uneven or sloping ground, the pivot allows the container to remain in a level position, therefore, reducing the chance of spillage. The heavy-duty wheelbarrow that make light work of your load.

#### Easier Tipping

Finally, the skip can be locked into place with a simple, robust catch, to allow the operator to load/unload the skip with a spade without it swinging. Also, with the skip locked the barrow can be tipped and emptied like a conventional wheelbarrow. When tipping, the Busy Barrow's handles are designed to reduce the height the operator needs to raise them in order to empty the skip and significantly reduces the amount the operator has to lean compared to a conventional wheelbarrow.

Additional skips can be purchased including a perforated bottom useful for draining wet loads.

The Busy Barrow is a boon to busy nurseries where frequent lifting of wheelbarrows can take its toll. It is just as at home in the garden where its ergonomic design helps make gardening less of a strain.

#### Buying the Busy Barrow

The Busy Barrow is available with a flat-pack or fully welded frame. You can buy on line at [www.BusyBarrow.com](http://www.BusyBarrow.com) or call 0121 526 6919 and speak to our friendly staff now.
