

What is a Caravan mover?

A caravan mover, sometimes called a motor mover, is a system consisting of two or four electric motors driving rollers that can be engaged with the caravan tyres in order to move the caravan forward, backwards, turn and even rotate on its axis, all at the touch of a button. The motors are powered by your caravan leisure battery and are engaged when you need to manoeuvre the caravan and disengaged when you are towing.

How can I choose the right mover?

At Caravan Movers Online we have taken the hard work out of selecting the right mover for your caravan. You will find models from Purpleline, Truma, Reich, PowrTouch and Grove all compared side by side.

Visit www.CaravanMoversOnline.co.uk and pick from the best caravan movers around.

Moving your caravan
can be as easy as this

Nationwide Fitting Service

Caravan Movers Online can offer you the convenience of delivering and fitting your new motor mover at your own home.

Most installations take between two to four hours to fit, and on completion we carry out a comprehensive test and give you a full demonstration of the product to get you started.

If you have any questions about any of the products we supply or about our installation service please call us on [0845 46 36 175](tel:08454636175).
